Bayesian estimation

Extend decoding of $s \rightarrow s^*(t)$

NOT FOR REUSE

The role of the conditional mean

Want an estimator s_{Bayes}

Introduce an error function, $L(s, s_{\text{Bayes}})$; minimize error.

$$\int ds L(s, s_{\text{Bayes}}) p[s|\mathbf{r}]$$

For least squares cost $L(s, s_{\text{Bayes}}) = (s - s_{\text{Bayes}})^2$;

Solution:

$$s_{\text{Bayes}} = \int ds p[s|\mathbf{r}] s$$
